Each child and family is unique; therefore, these Recommendations for Preventive Pediatric Health Care are designed for the care of children who are receiving competent parenting, have no manifestations of any important health problems, and are growing and developing in a satisfactory fashion. Developmental, psychosocial, and chronic disease issues for children and adolescents may require frequent counseling and treatment visits separate from preventive care visits. Additional visits also may become necessary if circumstances suggest variations from normal.

These recommendations represent a consensus by the American Academy of Pediatrics (AAP) and Bright Futures. The AAP continues to emphasize the great importance of continuity of care in comprehensive health supervision and the need to avoid fragmentation of care. Refer to the specific guidance by age as listed in the Bright Futures Guidelines (Hagan JF, Shaw JS, Duncan PM, eds. Bright Futures: Guidelines for Health Supervision of Infants, Children, and Adolescents. 4th ed. Elk Grove Village, IL: American Academy of Pediatrics, 2017).

The recommendations in this statement do not indicate an exclusive course of treatment or standard of medical care. Variations, taking into account individual circumstances, may be appropriate. **Notes**:
- **Range during which a service may be provided**
- **Risk assessment to be performed**
- **Risk assessment to be performed with appropriate action to follow**
- **To be performed**

6. Blood pressure measurement in infants and children with specific risk conditions should be performed at visits before age 3 years.

7. A visual acuity screen is recommended at ages 12 and 24 months, as well as in cooperative 3-year-olds. Instrument-based screening may be used to assess risk at ages 12 and 24 months, in addition to the well-visits at 3 through 5 years of age. See "Visual System Assessment in Infants, Children, and Young Adults by Pediatricians" (http://pediatrics.aappublications.org/content/137/1/381.full).

8. Emotional problems should have an evaluation within 3 to 5 days of birth and within 48 to 72 hours after discharge from the hospital to include evaluation for feeding and jaundice. Breastfeeding newborns should receive formal breastfeeding evaluation, and their mothers should receive encouragement and instruction, as recommended in "Breastfeeding and the Use of Human Milk" (http://pediatrics.aappublications.org/content/129/3/e827.full). Newborns discharged less than 48 hours after delivery must be examined within 48 hours of discharge, per "Hospital Stay for Healthy Term Newborns" (http://pediatrics.aappublications.org/content/137/1/381.full).

9. Confirm initial screen was completed, verify results, and follow up, as appropriate. Newborns should be screened, per "Year 2007 Position Statement: Principles and Guidelines for Early Hearing Detection and Intervention Programs" (http://pediatrics.aappublications.org/content/120/5/1183.full).

10. Verify results as soon as possible, and follow up, as appropriate. See "Identification of Hearing Loss in Infants and Children With Developmental Disabilities in the Medical Home: An Algorithm for Developmental Surveillance and Screening" (http://pediatrics.aappublications.org/content/118/1/145.full).

11. Antenatal screening should occur per "Identification and Evaluation of Children With Autism Spectrum Disorders" (http://pediatrics.aappublications.org/content/120/5/1183.full).

12. Screening should occur per "Identification and Evaluation of Children With Autism Spectrum Disorders" (http://pediatrics.aappublications.org/content/120/5/1183.full).

13. The assessment should be family centered and may include an assessment of child social-emotional health, caregiver depression, and social determinants of health. See "Promoting Optimal Development: Screening for Behavioral and Emotional Problems" (http://pediatrics.aappublications.org/content/135/2/384) and "Poverty and Child Health in the United States" (http://pediatrics.aappublications.org/content/137/1/e20153596).

Summary of Changes Made to the Bright Futures/AAP Recommendations for Preventive Pediatric Health Care (Periodicity Schedule)

This schedule reflects changes approved in February 2017 and published in April 2017. For updates, visit www.aap.org/periodicityschedule

For further information, see the Bright Futures Guiderline, 4th Edition, Evidence and Rationale chapter https://brightfutures.aap.org/Bright%20Future%203/Documents/84E_Evidence_Rationale.pdf.

CHANGES MADE IN FEBRUARY 2017

HEARING

- Timing and follow-up of the screening recommendations for hearing during the infancy visits have been delineated. Adolescent risk assessment has been changed to screening once during each time period.

- Footnote 8 has been updated to read as follows: “Confirm initial screen was completed, verify results, and follow up, as appropriate. Newborns should be screened, per ‘Year 2007 Position Statement Principles and Guidelines for Early Hearing Detection and Intervention Programs’ (http://pediatrics.aappublications.org/content/120/4/898.full).”

- Footnote 9 has been added to read as follows: “Verify results as soon as possible, and follow up, as appropriate.”

- Footnote 10 has been added to read as follows: “Screen with audiometry including 6,000 and 8,000 Hz high frequencies once between 15 and 18 years of age.”

- Footnote 11 has been added to read as follows: “Assess whether the child has a dental home. If no dental home is identified, perform a risk assessment (http://pediatrics.aappublications.org/content/123/1/18.full).”

- Footnote 12 has been added to read as follows: “Verify results as soon as possible, and follow up, as appropriate.”

- Footnote 13 has been added to read as follows: “For adolescents, see “Fluoride Use in Caries Prevention in the Primary Care Setting” (http://pediatrics.aappublications.org/content/134/5/1435.full).”

- Footnote 14 has been added to read as follows: “If primary water source is deficient in fluoride, consider oral fluoride supplementation. See “Maintaining and Improving the Oral Health of Young Children” (http://www.aap.org/RiskAssessmentTool).”

PSYCHOLOGICAL/Behavioral Assessment

- Footnote 13 has been added to read as follows: “This assessment should be family centered and may include an assessment of child emotional-social health, caregiver depression, and social determinants of health. See ‘Promoting Optimal Development: Screening for Behavioral and Emotional Problems’ (http://pediatrics.aappublications.org/content/135/2/384) and Poverty and Child Health in the United States” (http://pediatrics.aappublications.org/content/134/6/1603.full)

TOBACCO, ALCOHOL, OR DRUG USE ASSESSMENT

- The header was updated to be consistent with recommendations.

DEPRESSION SCREENING

- Adolescent depression screening begins routinely at 12 years of age (to be consistent with recommendations of the US Preventive Services Task Force (USPSTF)).

MATERNAL DEPRESSION SCREENING

- Screening for maternal depression at 1, 2, 4, and 6-month visits has been added. Footnote 16 was added to read as follows: “Screening should occur per ‘Incorporating Recognition and Management of Perinatal and Postpartum Depression Into Pediatric Practice’ (http://pediatrics.aappublications.org/content/126/5/102).”

NEWBORN BLOOD

- Timing and follow-up of the newborn blood screening recommendations have been delineated.

- Footnote 19 has been updated to read as follows: “Confirm initial screen was accomplished, verify results, and follow up, as appropriate. The Recommended Uniform Newborn Screening Panel (http://www.gha.gov/advisorycommittees/mchbadvisor/heritabledisorders/recommendedpanel/uniformscreeningpanel.pdf), as determined by The Secretary’s Advisory Committee on Heritable Disorders in Newborns and Children, and state newborn screening laws/regulations (http://genes-r-us.uthscsa.edu/states/genes-r-f/files/obsdiseorders.pdf) establish the criteria for and coverage of newborn screening procedures and programs.”

- Footnote 20 has been added to read as follows: “Verify results as soon as possible, and follow up, as appropriate.”

NEWBORN BILIRUBIN

- Screening for bilirubin concentration at the newborn visit has been added.

- Footnote 21 has been added to read as follows: “Confirm initial screening was accomplished, verify results, and follow up, as appropriate. See ‘Hyperbilirubinemia in the Newborn Infant 235 Weeks Gestation: An Update With Clarifications’ (http://pediatrics.aappublications.org/content/124/4/1194.full).”

DYSPLASIDEMIA

- Screening for dysplasidemia has been updated to occur once between 9 and 11 years of age, and once between 17 and 21 years of age (to be consistent with guidelines of the National Heart, Lung, and Blood Institute).

SEXUALLY TRANSMITTED INFECTIONS

- Footnote 29 has been updated to read as follows: “Adolescents should be screened for sexually transmitted infections (STIs) per recommendations in the current edition of the AAP Red Book: Report of the Committee on Infectious Diseases.”

HIV

- A subheading has been added for the HIV universal recommendation to avoid confusion with STIs selective screening recommendation.

- Screening for HIV has been updated to occur once between 15 and 18 years of age (to be consistent with recommendations of the USPSTF).

- Footnote 30 has been added to read as follows: “Adolescents should be screened for HIV according to the USPSTF recommendations (http://www.uspreventiveservicestaskforce.org/uspstf/uspsdnch.htm) once between the ages of 15 and 18, making every effort to present confidentiality of the adolescent. Those at increased risk of HIV infection, including those who are sexually active, participate in injection drug use, or are being tested for other STIs, should be tested for HIV and reassessed annually.”

ORAL HEALTH

- Assessing for a dental home has been updated at the 12-month and 18-month through 6-year visits. A subheading has been added for fluoride supplementation, with a recommendation from the 6-month through 12-month and 18-month through 16-year visits.

- Footnote 32 has been updated to read as follows: “Assess whether the child has a dental home. If no dental home is identified, perform a risk assessment (https://www.aap.org/RiskAssessmentTool) and refer to a dental home. Recommend brushing with fluoride toothpaste in the proper dosage for age. See ‘Maintaining and Improving the Oral Health of Young Children’ (http://pediatrics.aappublications.org/content/134/5/1435.full).”

- Footnote 33 has been added to read as follows: “Perform a risk assessment (https://www.aap.org/RiskAssessmentTool).”

- Footnote 34 has been added to read as follows: “If primary water source is deficient in fluoride, consider oral fluoride supplementation. See ‘Fluoride Use in Caries Prevention in the Primary Care Setting’ (http://pediatrics.aappublications.org/content/134/3/626.full).”
